v2.0.1: Performance Monitor & Improvements

Latest

Compare

Git-Rocky-Stack released this 8 minutes ago

v2.0.1

205723b

What's New in v2.0.1

New Features

- **Performance Monitor Page** - Track application operation metrics in real-time
 - System overview cards: Memory usage, GC pressure, frame rate, tracked operations
 - Operation metrics table with count, average, min, max, P95, P99 timing
 - Performance status indicators (Excellent/Good/Fair/Poor/Critical)
 - Pause/Resume monitoring and Clear metrics controls
 - Export metrics to CSV for external analysis
- **Window Icon** - App icon now displays in the Windows title bar
- **Global Crash Logging** - Detailed exception reporting with crash files saved to Desktop

UI Improvements

- Chrome bezel styling on Performance page action buttons for consistency
- Performance page layout follows app design patterns with centered logo header

Documentation

- Updated User Guide with Performance Monitor documentation
- Updated release notes section with v2.0.1 changes

Technical

- Performance tracking integrated across all major operations (Dashboard, Memory, CPU, Cleaner, Large Files, Processes)
- Version bumped to 2.0.1
